

#### FULL STACK AI PLATFORM

# Accelerate all your Al development efforts safely and securely.

# Drive rapid time-to-value with a mission-tested Al platform

Clarifai enables government agencies to add artificial intelligence to their software. With computer vision, large language, and audio models in one platform, Clarifai equips your teams with all the tools they need to get Al into production with our secure, privacy-enabled, and scalable hybrid cloud offering.

With powerful out-of-the-box capabilities, supporting multiple use cases for deployment at operational scale is easy, safe, and secure. Platform-, cloud-, and edgeagnostic, our open architecture helps you build Al quickly so you can focus on your mission.

Clarifai's demonstrated success working with government and defense agencies on mission-critical CV use cases has hardened the company's platform to extend to a broad range of use case requirements.

# €IDC

# **Data Preparation**

### **Scribe Automated Data Labeling**

Al-assisted labeling capability will allow you to label your data

# Model Ops

Armada Serverless Inference

100x faster. Or use our labeling experts "LabelForce" to ensure models of the highest quality. Worker productivity metrics, as well as labeling accuracy with fully automated, project-specific evaluations.

#### **Spacetime Search and Data Management**

Allows for large scale data management via similarity, keyword or metadata searches, immediately upon ingestion by automatically indexing. Store and search vectors. Patented capabilities to search with custom concepts, without reindexing.

## **Model Building**

#### **Enlight Training and Evaluation**

Customizable model training toolkits for any model type and accuracy threshold. Open source, customizable evaluation modules configurable with Streamlit python libraries.

Elastic inference engine that scales up and down the compute resources to run your models at production volume cost effectively, without DevOps. Save as much as 70% on inference.

#### **Mesh Workflow Engine**

A drag and drop workflow engine. It allows you to tie models and logical operators together to solve complex problems.

#### **Collectors for Continuous Learning**

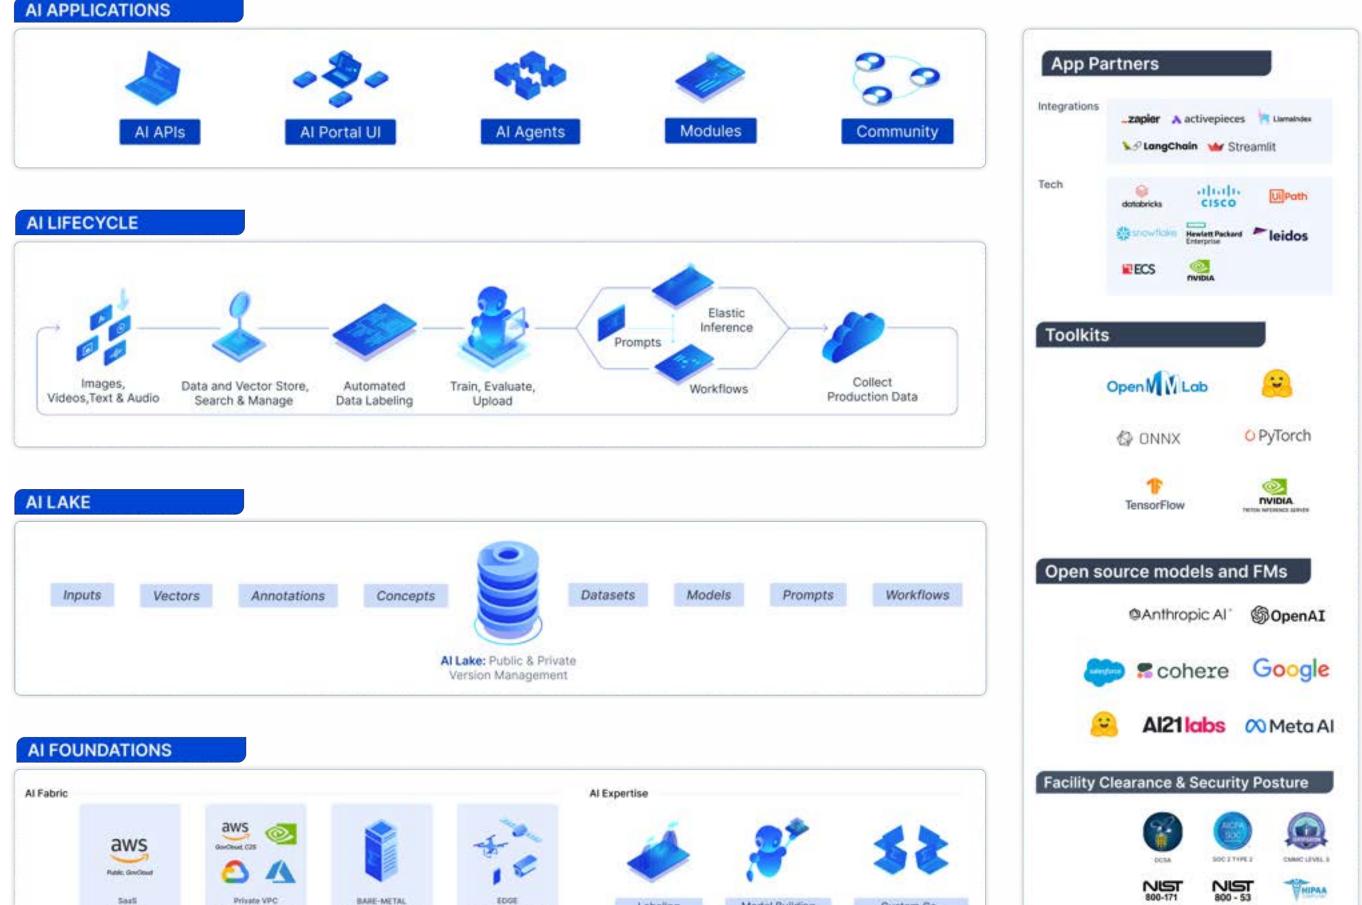

Collect targeted prediction data to feed back into projects, monitor data drift, auto label datasets and continuously create smarter model versions.

#### Flare Edge Al

Edge-optimized Clarifai installation for inference and edge data collection. Run on low-power devices or on-premise supercomputers.

# **Build generative AI at production scale**

99.99% uptime and reproducible AI with enterprise-grade privacy and security.

# **Al Lake<sup>™</sup> for Real Time Collaboration**

Users and teams collaborate together in a single place using the AI Lake<sup>™</sup>.

As organizations increase their adoption of AI, many are finding they need a single place to house all of their AI resources, make those accessible to teams and control access. In doing this, organizations maximize the oversight of their AI efforts, and make their efforts auditable, measurable, and reproducible. Clarifai pioneered the Al Lake<sup>™</sup>, which lets you organize all your Al models, datasets, workflows, and Uls in one place and collaborate across teams building Al, delivering fast time-to-value from all Al initiatives, while reducing the amount of resources needed.

Organizations that partner with Clarifai can be confident that they are building a "future-forward" AI strategy that ensures that previously siloed AI projects become visible across teams, can collaborate in real time, and leverage investments in all AI initiatives simply and cost-effectively.
